

Write a shell script that takes a filename from the user and if the file exists and is executable.

If the file is executable then the shell script should display the message ?File exists? otherwise it should display the message ?File does not exists or is not execuatable?.

```
echo "Enter file name"
read name
if [ -x $name ];
then
    echo "File exists"
else
    echo "File does not exists or is not
executable"
fi
```
